Portal_Documentation

This is an outline of information relevant to the architecture and maintenance of the portal, with links to further documentation where appropriate.

1. Portal architecture
   ♦ Essential support services / servers
      1. Git code repository
      2. Sourceforge repository
      3. Redmine project management / wiki for the portal
      4. NEMO wiki (this site)
      5. Master spreadsheet that lists all portal form fields and has development notes. Check out from
         sourceforge svn:
         $ svn co
         https://nemoontologies.svn.sourceforge.net/svnroot/nemoontologies/RDFdata
   ♦ Three application server environments
      1. Local development on a laptop/desktop
      2. Development server: http://dev-portal.nemo.nic.uoregon.edu
      3. Production server: http://portal.nemo.nic.uoregon.edu
   ♦ Components required in all environments
      1. Database: PostgreSQL 8.x
      2. Language support: Ruby 1.9.2p180
      3. Web application framework: Rails 3
      4. Version control: Git client
      5. Deployment: Capistrano
   ♦ Additional components required in dev/prod environments
      1. nginx web server
      ♦ Web app implementation details
         2. Authorization with CanCan
         3. Field wrappers
      4. Nav bar
      5. CSS styles
      6. Object hierarchy
2. Administrative tasks in the portal
   ♦ Adding a portal user in conjunction with [new NEMO user steps].
   ♦ Managing existing users: add "/users to base server URL, whether on dev, prod, or local server.
      User roles.
   ♦ When ontology is updated: Refreshing ontology terms, db-onto-maps, and field annotations in the
      portal.
   ♦ Managing field annotations
3. Development tasks
   ♦ Check out code from git repository to a local dev environment and work on it locally. Includes
      checking back in and other git workflow.
   ♦ Deploy code to dev/prod servers with Capistrano.
   ♦ Perform database dumps and loads
   ♦ Change database schema with migrations
