

Screencasts

- Changing Colormap in MATLAB: (Recorded on August 4, 2011; You may want to download it first with Option-click.) How to define a new colormap for plotting ERP topos in EP Toolkit.
- Trouble loading RDF in Protege: (Recorded on August 4, 2011; You may want to download it first with Option-click.) What to do if you have trouble loading RDF files in Protege.
- RDF classification with NEMO ver 2.0 and later: (Recorded on August 4, 2011; You may want to download it first with Option-click.) How to use NEMO ontology (v2.0 and later) to classify your data in Protege.
- NEMO ontology part II: (Recorded on June 27, 2011; You may want to download it first with Option-click.) Reviews how to use Protege, along with built-in reasoners (e.g., Hermit, Pellet), to classify simulated ERP data.
- NEMO ontology part I: (Recorded on June 27, 2011; You may want to download it first with Option-click.) Reviews how to download and set up Protege, a free piece of software for visualization and editing of ontologies.
- NEMO ERP Analysis Toolkit III (Segmentation): (Recorded on June 22, 2011; You may want to download it first with Option-click.) Reviews how to initialize the NEMO Segmentation metascript and how to run it on your own datasets.
- NEMO ERP Analysis Toolkit II (Decomposition): (Recorded on Jan 11, 2011; You may want to download it first with Option-click.) Reviews how to initialize the NEMO Decomposition metascript and how to run it on your own datasets.
- NEMO ERP Analysis Toolkit: (Recorded on Jan 11, 2011; You may want to download it first with Option-click.) Reviews how to set-up NEMO Decomposition and Segmentation tools in matlab and how to test their functionality.
- Versions: (Recorded on Jan 10, 2011; You may want to download it first with Option-click.) Versions is an open source (free) GUI frontend to Subversion for the MAC.
- RapidSVN: An open source (free), cross-platform, GUI frontend to Subversion (You may want to download it first with Option-click.)
 - ◆ (Note: To get the "diff" view, you need Apple XCode installed. Get it [here](#) by clicking on Mac Dev Center. You need a free account.)
- Basic command line Subversion (You may want to download it first with Option-click.)
- Create a new Meeting Notes page
